

## Slingshot Exhaust Heat Shield

The Slingshot is delivered without a heatshield from the factory for the exhaust manifold, allowing heat to radiate easier into the engine bay. The heatshield helps protect the engine bay from heat and also hides most of the exhaust manifold which is prone to rusting. Installation only takes a couple minutes.

**\*\*\*Please make sure that the engine is off and the exhaust is cool to the touch before starting this installation.\*\*\***

### INSTALLATION IS EASY!

#### TOOLS NEEDED

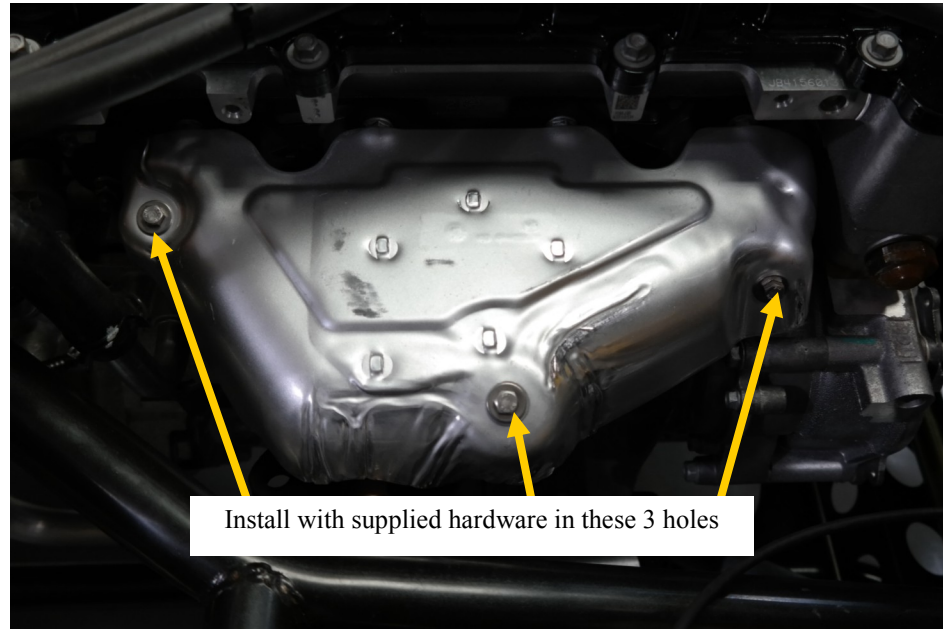

10mm socket/wrench

Socket Driver

Anti-seize (suggested)

#### To Install:

Use the supplied hardware to install the heat shield on the exhaust manifold. There are 3 bolt holes that will line up with the 3 threaded holes on the exhaust manifold. A little bit of anti-seize on the threads is suggested but not required when installing. The bolts just need to be hand tight.

If you have any questions feel free to call or text to our tech line—864-907-6004.
